## Shakin' Stevens FOH

### FOH Desk

Soundcraft Vi6

### Outboard

2 Channels of third octave graphic E.G. KT DN370

1 x CD Burner set up to record a L/R mix E.G. Tascam CD-RW90DSL

Analogue desks need prior approval

Eg Midas Heritage 3000 minimum 48 channels, 10 vocal's, stereo out, and 8 aux sends.

6 x Channels of gates eg Drawmer DS201.

12 x Channels of compressors eg BSS DPR402.

1 x Vocal reverb unit eg PCM90.

2 x Multitix units eg SPX990.

1 x Delay unit eg T.C Electronic.

1 x CD Burner E.G. Tascam CD-RW90DSL 1 CD player.

1 Comms beltpack and headset.

1 Comms peu.

### Shakin' Stevens FOH system

Left and right speaker system, V-DOSC Enough to cover venue at 110dB, 40Hz to 18kHz. 2 channels of third octave graphic eq, eg KT DN370 for the system plus the relevant controller or processors and amplifiers for system.

Where required, down system, V-DOSC to cover any balconies at 110dB, 40Hz to 18kHz. 2 channels of third octave graphic eq, eg KT DN370 for the system plus the relevant controller or processors and amplifiers for system.

Left and right Infill speaker systems, DV-DOSC as required, 105dB, 100Hz to 18kHz.

2 channels of third octave graphic eq, eg KT DN370 for the system plus the relevant controller or processors and amplifiers for system.

We expect a minimum of two system engineers that are familiar with the system during the setup and show.

## Shakin' Stevens Monitors Rider

### Desk

Digidesign Profile

### Wedges

3 x D88

1 x D88 Q-Sub

Wedges are USL, SR for Autocue and SL for listen wedge

### Amps

Please be sure to provide all necessary amps and cabling (D&B or Lab Gruppen are favourites)

### Wireless

We will be carrying our own In ear system for all mainland UK shows. Please advise of any restrictions to radio use during advancing.

On any show outside of UK we will require TEN (10) x Sennheiser EW300 G2 or G3 with combiners and antennas to be provided by the production and all required licenses to be available to monitor engineer and tour manager.

We will require all the above to be located stage left with an unobstructed access to the stage split and a clear view of DSC. A competent, sober and English speaking monitor engineer / system tech will be required to oversee setup of the system and be available for the duration. We will email over a compatible show file with the show advancing that must be tested on the mixing desk; when received, any incompatibilities MUST be notified to the tour manager to avoid nasty surprises.

Any questions please don't hesitate to get in touch.

Front of stage to mic position is 8 feet. Mic position to drum riser is 11 feet. Mic position to EACH sidefill is 16 feet, that is 32 foot between sidefills is a maximum, even if the stage is wider.

### Shaky's NEMs

His voice and DLY quite loud, plus an even mix of all the rest but lower down. Ambience mics should be faded UP in between songs, but muted during performance.

### Notes:

A delay unit is required for monitors, delay is 140ms, slapback type delay, with NO delay feedback, at almost equal level to Shaky's voice, say about 2 dB lower in level. EQ for Shaky's voice should have quite a lot of presence, ie push the 1.5 kHz to 4 kHz area a bit. Front of stage to mic position is 8 feet. Mic position to drum riser is 11 feet. Mic position to EACH sidefill is 16 feet, that is 32 foot between sidefills is a maximum, even if the stage is wider.
